Date:

The following table shows the tasks, dependencies, and estimated times a project manager might input to a PERT chart for a software development project, and the calculated Expected Times:

Task ID	Task Description	Predecessor Task(s)	Optimistic Time (O)	Most Likely Time (M)	Pessimistic Time (P)	Expected Time (T_E)
A	Establish Project		4	5	12	6
B	Establish Requirements	A	2	3	4	3
C	Produce Software Specification Documents	B	6	8	22	10
D	Write Test Plan	C	4	6	8	6
E	Write Manuals	C	5	7	15	8

(Level, 2015) The **network diagram** depicts the relationship between tasks and their dependencies (predecessor tasks). The project begins on the left with Task A, which has no predecessor. Task B follows Task A since it only has Task A as its predecessor. Tasks D and E both have Task C (specification) as their predecessor, which allows them to be performed simultaneously.

Figure 2 Network Diagram

GANTT charts represent the tasks in a project by displaying a box or line that exhibits the calendar duration of each task on the horizontal axis. The vertical axis usually

3.4 Software and Hardware Requirements

Hardware Requirements:

- Processor: Intel(R) Core(TM) i3-5005U CPU @ 2.00GHz
- RAM: DDR3 8 GB
- Graphics: Intel HD Graphics 5500
- Hard Disk Capacity: 50 GB
- Network Adapter: Realtek PCIe FE Family Controller
- Keyboard: Standard PS/2 or USB Keyboard
- Mouse: Standard Optical Mouse
- DVD Writer

Software Requirements:

Software	Functionality	Use in project
Windows 10 Pro 64 Bit	System Software	Operating System
MYSQL 2008	Relational Database Management System	Used to create database and tables, store data.
Javascript	Programming Language	Underlies most other code within the Project
ReactJs	Provide Framework	Provides a powerful frontend framework.
Microsoft Word	Word Processor	Used to create documentation
Lucid Chart	UML Modeling Tool	Used to draw diagrams
Online Plagiarism Software (smallseotools.com)	Plagiarism Checking Tool	Checking plagiarism in documentation
Grammarly	Grammar Checking Tool	Used to checking grammatical mistakes in documentation
Open Source Test Automation Tools	Test Case Designing	Used to test automation

Chapter 1: Introduction

1.1 Background

Adapting to the current technology of attendance management programs has proven to help manage time and transform the workplace atmosphere. The system provides the advantage of minimizing paperwork, which ultimately saves time and effort when it comes to maintaining accurate attendance records for students. With a few clicks, time-consuming activities like allocation of assignments manually, tracking shift changes, and so on can be monitored and assigned. Old system was manual and keeping records was intricate. Storing data in paper form is always risky as reserving data is tedious job. Instead using database and storing data online is in any case better option. As storing data is concern for the system, there is also chance of human error in the system at same time. Also using online attendance management system can save time as there is no need of manual attendance marking, no need to generate manual reports as well as no need to manually analyze the data, our system will automatically do this process and will generate a pleasant data format for better experience and analyzation. Therefore, using online attendance management system seems that it is much better choice to go with, as it has certain features and benefits.

1.2 Objectives

- To produce a web-based system that allow student to register and mark their attendance.
- Replacing old manual method is first motive of the system.
- To ease attendance managing process and overcoming previous issues is the aim of the system.
- Students should easily mark there attendance just by scanning a QR.
- If some student do not have access to smartphone there is a manual by which admin can mark student's attendance.
- Admins should easily get reports.
- Admins should easily analyze the data as per there use.
- This should make entire system automated and quick.

Project scheduling refers to the process of determining the timing of project activities based on defined durations and precedent activities. Schedule constraints are used to determine when an activity should start or end, taking into consideration factors such as duration, predecessors, external predecessor relationships, resource availability, target dates, or other time constraints.

Program Evaluation Review Technique (PERT) charts show each task in a

Figure 1: PERT Chart Diagram

Project as a node. Dependencies between tasks are clearly shown by interconnections between the task nodes. PERT charts provide timing information for each task involved in a project. They are similar to the critical path method (CPM), which identifies the longest path through the project and determines the minimum time required for the project to be completed.

To make estimates as accurate as possible using the PERT method, the project manager is required to provide three estimates. The three estimates are:

- Optimistic Time (O) – the shortest time that the activity is likely to take. There will be a small probability (less than 5%) of this happening
- Most Likely Time (M) – the project manager should have a high degree of certainty that the task will be completed within this time
- Pessimistic Time (P) – the project manager should be almost certain (e.g. 99%) that the task will be completed within this time

The 'expected time' T_E is then calculated as $T_E = O + 4M + P / 6$.

Below is a table that displays the estimated times, task dependencies, and Expected Times for a software development project that a project manager might input into a PERT chart:

Task ID	Task Description	Predecessor Task(s)	Optimistic Time (O)	Most Likely	Pessimistic Time (P)	Expected Time (T_E)

4.5 Security Issues

Security and Data Protection

- ✓ Use encryption to save passwords in database.
- ✓ Use of such encryption which cannot be decrypted.

of unnecessary calculations and minimizing the size of data structures where possible.

Finally, we can use code profiling tools to identify performance bottlenecks and areas that need optimization. Profiling our code can help us identify areas where we can make improvements, and ensure that our code is running as efficiently as possible.

J. S. M. College, Alibag

Methodology

Iterative model

This Model, you can start with some of the software specifications and develop the first version of the software. After the first version if there is a need to change the software, then a new version of the software is created with a new iteration. Every release of the Iterative Model finishes in an exact and fixed period that is called iteration.

Fig. Iterative Model

- 1. Requirement gathering & analysis:** In this phase, requirements are gathered from customers and check by an analyst whether requirements will fulfil or not. Analyst checks that need will achieve within budget or not. After all of this, the software team skips to the next phase.
- 2. Design:** In the design phase, team design the software by the different diagrams like Data Flow diagram, activity diagram, class diagram, state transition diagram, etc.
- 3. Implementation:** In the implementation, requirements are written in the coding language and transformed into computer programmers which are called Software.
- 4. Testing:** After completing the coding phase, software testing starts using different test methods.

4.3 Procedural Design

The purpose of procedural design is to transform the structural component into a program description.

4.3.1 Logic Diagram

ACKNOWLEDGEMENT

The completion of this project would have been impossible without the guidance and support from my internal guide. Thus, I would like to thank those who gave me right instruction as to go about project.

Dedication, hard work, patience and correct guidance are required thing during project completion. Able and timely guidance not only help in making an effort fruitful but also transform the people of learning and implementation into on enjoyable experience.

In particular, I like to thank for **the blessing to our** Principal

Dr. **A. K. Patil** who have always been source of inspiration. I wish to thanks Mrs. Shilpa N. Kawale (In-charge of Computer Science Dept.) for having faith in this project idea and granted support in all direction.

We are grateful to our Project Coordinator Mr. Kundan W. Sawant for the internal guidance, inspiration and constructive suggestions that helpful us in the preparation of this project.

I would like to thank our college library and all my friends for their help in completion of my project reports.

Who share their year of experience, excellent support and blossoms of suggestions with me finally, I would like to thank our family members, friends and all other who had helped us by making all the facility available.

DECLARATION

I hereby declare that the project entitled, "**Library Management System**" done at place where the project is done, has not been in any case duplicated to submit to any other university for the award of any degree. To the best of my knowledge other than me, no one has submitted to any other university.

The project is done in partial fulfillment of the requirements for the award of degree of **BACHELOR OF SCIENCE (COMPUTER SCIENCE)** to be submitted as final semester project as part of our curriculum.

Shreya

Miss. Shreya Shyam Mhatre.
